Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

- 6) ☐ Other: ____.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Request for reconsideration, filed 8/12/2004, with respect to the rejection(s) of claim(s) 1, 2 and 4 under USC 102e have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Takeuchi.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Takeuchi et al.

Claim 1 and 4: A moving picture experts group (MPEG) decoder for producing a caption for display on a screen, said decoder producing a video stream from an externally-applied MPEG stream, the decoder comprising:

- a video decoder for decoding the video stream and extracting user data from header information of the video stream; See figures 1 and 2
- a header memory for storing the user data; (See figure 5 showing the header data which is clearly extracted, storage of the header is inherent.)
- a central processing unit (CPU) for producing caption data by decoding the user data and transforming the caption data into on-screen-display (OSD) object data; (See Column 1 line 57 through column 7 line 7)
- an OSD controller for transforming the OSD object data into pixel data in response to a predetermined enable signal and outputting the pixel data; and a video mixer for mixing

the pixel data with the decoded video data. (See column 3 lines 38-53, column 13 lines 1 through 29 as well as figure 4 item 193 and 195 and figure 14.)

Wherein the OSD object data is considered data transformed from caption information when a caption function is performed, and considered data for displaying non caption OSD characters when a non caption function is performed. (See figure 17. The only time the caption data comes from the OSD data buffer is when there is a request for the caption data, otherwise the non caption data is displayed on the screen.)

Claim 2. The MPEG decoder of claim 1, wherein the OSD controller comprises:

an OSD buffer for storing the OSD object data received from the CPU; and
an OSD processor for reading the OSD object data from the OSD buffer and transforming the OSD object data into pixel data. (See figure 4 item 195. A buffer is inherent since the controller outputs OSD data after interpreting a command from the CPU. See column 10 lines 18-23.
